

AMENDMENTS

Please amend the present application as follows:

In the Specification

The following is a marked-up version of the specification with the language that is underlined ("___") being added and the language that contains strikethrough ("——") being deleted:

For paragraph [0042] (from published application), please amend as follows:

[0042] A first compressed stream encoded with the first compression format can be generated by compression engine 217 at an earlier time or could possibly be generated by a different and unknown compression engine and received by STT 200 via a communication port such as, for example, communication interface 242. The first compression format may be characterized by a first compression computational complexity and a first decompression computational complexity. A second compression format may be characterized by a second compression computational complexity and a second decompression computational complexity. Compressing or decompressing a video segment having the second format requires more STT 200 resources ~~that~~ than compressing or decompressing a corresponding video segment having the first format.
